

UPWORK PROFILES MASTER DATA

Compiled Record: Fizza, Zaira, Mehak, Aneeb, Hassan

This document contains all stored data on five Upwork freelancer profiles: client contracts, portfolio projects, client reviews, roles, project start and end dates, and role specific first person descriptions.

PART 1: FIZZA

Member of the BreakthroughPulse team.

1.1 CLIENT CONTRACTS

Project 1: Performance First Web Developer, SBA 504 Lead Gen Website

- Client Name: Shohel Ahmed
- Job Description: Build a standalone SBA 504 loan website using a static first or hybrid framework (Astro, Next.js, or equivalent), with clean HTML rendering for critical pages, about 11 reusable launch page templates, headless or lightweight CMS, metadata, canonicals, sitemap, robots.txt, JSON LD structured data, lead capture forms with tracking and spam protection, and staging and production deployment. Engagement started with a paid discovery milestone before full build.
- Client Feedback: 5.0 stars. Client said Fizza built and deployed the entire site (Astro, Sanity CMS, Vercel) with clean, well structured work, and that what set her apart was her post project support: she diagnosed and fixed a deployment issue quickly and handled full account handover without being chased. A second 5.0 review (May 11, 2026) noted she delivered the full 11 page Astro plus Sanity site ahead of schedule with clean schema implementation, responsive design, GA4 integration, JSON LD, form handling, and deployment.
- My Role: Full stack and technical build (frontend, CMS setup, deployment, SEO technical implementation)
- Project Start Date: Apr 13, 2026
- Project End Date: Aug 19, 2026
- Budget: Fixed price, \$2,450 earned

Project 2: React plus Firebase Developer for Saudi AI E Commerce Startup

- Client Name: Muhammad Behsas
- Job Description: Backend work wiring an already built React frontend (WearMeOut.ai, AI custom t shirt platform, 17 pages, bilingual Arabic and English) to real APIs. Firebase setup in me central1, Firebase Auth with Email, Google, Apple, AI image generation pipeline using Replicate or fal.ai with 4 tier fallback, Tap Payments integration, Firestore order management dashboard, content moderation with keyword filter plus OpenAI Vision API, admin approval queue, deploy to Vercel.
- Client Feedback: 5.0 stars. Client said she took full ownership with real dedication and discipline, called her reliable, helpful, easy to work with, said she would only work with her going forward. Second 5.0 review (Jul 1, 2026) called her a brilliant advisor who added a lot of value.

- My Role: Backend and Firebase developer, Auth, Firestore, API integrations, deployment
- Project Start Date: May 5, 2026
- Project End Date: Jul 25, 2026
- Budget: Fixed price, \$3,100 earned

Project 3: Digital Asset Management System Development

- Client Name: Antonio Bonet
- Job Description: Build a fully branded, secure digital asset management portal for managing and distributing brand assets (logos, product images, spec sheets). Internal teams upload and organize assets; distributors and partners access brand specific materials via admin issued credentials. Required bilingual (English and Spanish) support with role based access, a CDN solution (Cloudflare R2 or Bunny), a headless CMS (PayloadCMS or Sanity) or custom backend, frontend options of React 19, Next.js 16, Svelte, or Vue styled with Tailwind CSS, and backend options in Node.js, Python, or PHP, with optional TanStack for data management and BetterAuth for authentication.
- Client Feedback: 5.0 stars. Client called her great to work with, knowledgeable and honest, and said she helps align goals based on project requirements. Second 5.0 review (Feb 13, 2026) called her cooperative and communicative, a true team player.
- My Role: Full stack development
- Project Start Date: Dec 20, 2025
- Project End Date: May 11, 2026
- Budget: Fixed price, \$400 earned

Project 4: Chrome Extension Development with WXT, Svelte, and Rails Backend

- Client Name: Rory G
- Job Description: Work on a LinkedIn recruiter sourcing browser extension (WXT, Vite, Svelte 5, TypeScript, Tailwind CSS), backed by a Rails 8 API with JWT authentication. Scope included new AI integrations, browser notifications, improved search logic and extension UI, working within an existing codebase.
- Client Feedback: 5.0 stars. Client said she quickly understood the nuances of the project and took initiative, recommended her.
- My Role: Extension and frontend developer (Svelte, WXT) with Rails backend
- Project Start Date: Dec 22, 2025
- Project End Date: Mar 16, 2026
- Budget: Hourly at \$25 per hour, 159 hours, \$3,979.17 earned

Project 5: Looking for a Full Stack Dev, React or Next.js and Node.js, Visual Search Engine

- Client Name: Ofer Langer
- Job Description: Full stack developer to help finish a first of its kind visual search engine for software (appranker.io). Frontend and DB were already about 75 percent built via Base44 (no code platform), with about 10 percent of the crawl and search mechanism live. Scope was the final 15 percent: CSS adjustments matching Figma mockups, making all functionality work, and consolidating the Base44 project with the live site. Required strong React, Next.js, Node.js skills, precise CSS and animation work (Tailwind, shadcn/ui, Framer Motion) matching Figma exactly for an SPA flow with no page reloads, and experience merging codebases.
- Client Feedback: 5.0 stars. Client called her an exceptional Full Stack developer, praised brilliant and creative work using Python, React, and Node.js, excellent communication, meeting all deadlines, a true professional who thinks out of the box.
- My Role: Full stack developer (frontend CSS and animation and codebase consolidation)

- Project Start Date: Dec 14, 2025
- Project End Date: Dec 31, 2025
- Budget: Fixed price, \$150 earned

Project 6: Deploy Python Trading Bot to Railway or Heroku, Kalshi API Integration

- Client Name: Sajjad Masumi
- Job Description: Deploy an already complete Python 3.11 or Flask trading bot (Kalshi prediction markets API with RSA PSS authentication, Discord webhook notifications, Gunicorn WSGI) from Replit to Railway or Heroku for 24 by 7 operation. Configure environment variables, set up dual web dashboard plus background worker processes, test deployment, provide documentation.
- Client Feedback: 5.0 stars (Aug 11, 2025). Client called her amazing and knowledgeable in deploying the trading bot, said she helped fix bugs, was very prompt with great communication, said they would definitely use her again.
- My Role: Deployment and DevOps (Railway deployment, environment config, background workers)
- Project Start Date: Jul 1, 2025
- Project End Date: Dec 8, 2025
- Budget: Hourly at \$20 per hour, 29 hours, \$640 earned

Project 7: Looking for a Full Stack Dev, React or Next.js and Node.js, Second Engagement

- Client Name: Ofer Langer
- Job Description: Full stack development helping with a website built on a No Code platform, navigating tasks leading up to launch.
- Client Feedback: 5.0 stars. Client said she did a wonderful job finding creative solutions to challenges, called her one of the most brilliant and remarkable developers they had encountered, said she is the right person for complex or challenging projects.
- My Role: Full stack developer
- Project Start Date: Nov 3, 2025
- Project End Date: Nov 18, 2025
- Budget: Fixed price, \$120 earned

Project 8: Integrate Yotpo.com Reviews into Ruby on Rails Based Avenue CMS Store

- Client Name: Dmytro
- Job Description: Integrate Yotpo.com reviews into a Ruby on Rails based Avenue CMS e commerce store, for each individual product.
- Client Feedback: 5.0 stars. Very good work, highly skilled developer, highly recommend for hire.
- My Role: Backend and integration developer (Ruby on Rails)
- Project Start Date: Jul 23, 2025
- Project End Date: Aug 1, 2025
- Budget: Fixed price, \$10 earned

Project 9: Senior Full Stack Developer for Candidate Screening

- Client Name: Jorick Alberga

- Job Description: Help screen candidates for a full stack developer role on an ecommerce SaaS project, evaluating proficiency in React, TypeScript, Next.js, Express.js, and PostgreSQL.
- Client Feedback: 5.0 stars (Dec 11, 2025). Client said it was a pleasure working with her, praised clear communication and fast work, called her clearly an expert in her field.
- My Role: Technical screener and evaluator for candidate interviews
- Project Start Date: Nov 25, 2025
- Project End Date: Mar 4, 2026
- Budget: Hourly at \$20 per hour, 7 hours, \$140 earned

Project 10: Senior Full Stack Developer, Next.js, Firebase, Community Transport Platform

- Client Name: Jose L Peralta
- Job Description: Review, improve, and continue development of an existing Community Transport Platform (Next.js, Firebase), with Uber style booking and dispatch, driver, rider, partner, and admin portals, maps integration, and role based access. Scope includes codebase review, scalability assessment, completing remaining modules, UX improvements, new features, and planning a future mobile app.
- Client Feedback: None yet, job in progress.
- My Role: Senior Full Stack Developer (Next.js, Firebase)
- Project Start Date: Jul 6, 2026
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$370 earned so far

Project 11: Mythos Archive, Architecture and Discovery Sprint

- Client Name: Robby
- Job Description: Private (job description not disclosed).
- Client Feedback: 5.0 stars (Jul 25, 2026). Client called working with her one of the best experiences with a software developer, said she thinks deeply about the product and contributes creative ideas, praised her technical skill, ownership of the vision, and outstanding communication, called her a true product partner.
- My Role: Architecture and Discovery
- Project Start Date: May 7, 2026
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$12,750 earned so far

Project 12: Senior React or TypeScript Developer, Property Management SaaS Platform

- Client Name: Evens Michel
- Job Description: Full stack development on Resido, a production AI assisted multi tenant property management SaaS platform for independent landlords and small property managers. Covers platform analysis and audit, core feature enhancements, real time features such as WebSockets, live chat, payments, notifications, advanced analytics, and testing, docs, and deployment.
- Client Feedback: 5.0 stars (Jan 10, 2026). Excellent Developer.
- My Role: Senior React or TypeScript Developer
- Project Start Date: Nov 26, 2025
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$400 earned so far

Project 13: Develop Multivendor GIS Asset Management App

- Client Name: Olly Walls
- Job Description: Develop a Multivendor GIS Asset Management App (details beyond the title not provided).
- Client Feedback: 5.0 stars (Oct 25, 2025). Client said she responds immediately to requests with the function already implemented, has a sixth sense for what is being asked, puts in real time and effort.
- My Role: Not specified
- Project Start Date: Jul 5, 2025
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$4,232 earned so far

1.2 PORTFOLIO PROJECTS

Portfolio 1: Unimog, E commerce Logistics System, OLX Mall

- Project Title: Unimog, E commerce Logistics System, OLX Mall (olx.com.pk)
- My Role: Senior Backend Engineer, Ruby on Rails
- Description: Led development of a logistics system for OLX Mall, integrating multiple 3PL providers, implementing role based access, designing a state machine to manage package lifecycle from order to delivery.
- Skills: Ruby on Rails, Next.js, React, React Native
- Published Date: Apr 15, 2025

Portfolio 2: Dubizzle Motors App Migration

- Project Title: Dubizzle, Motors App Migration
- My Role: Senior Mobile Developer, React Native, NativeBase Migration
- Description: Led migration of the Dubizzle Motors mobile app from legacy architecture to NativeBase framework, rebuilding vehicle listing management, search filters, dealer dashboards, and real time analytics, with responsive UI and a scalable component library.
- Skills: React Native, NativeBase, Node.js, Vue.js, Shopify APIs, AWS EC2
- Published Date: Apr 15, 2025

Portfolio 3: Fullscript, Meditech Dispensary Platform

- Project Title: Fullscript, Meditech Dispensary Platform
- My Role: Senior Full Stack Engineer, Ruby on Rails, ReactJS, GraphQL, NodeJS
- Description: Led Emerson catalog platform modernization, advanced product filters, responsive PDPs, streamlined checkout flows, a settings management system, and a Cypress E2E testing framework with automated regression coverage, plus GraphQL API integration for real time inventory updates.
- Skills: Ruby on Rails, ReactJS, GraphQL, PostgreSQL, Cypress
- Published Date: Apr 12, 2025

Portfolio 4: LinkedIn Boolean Search Tool, Boolerize

- Project Title: LinkedIn Boolean Search Tool, Chrome Extension and Rails AI Backend, Boolerize

- My Role: ML Engineer
- Description: Built and maintained the Boolerize Chrome extension and Rails API, LinkedIn, Sales Navigator, and Recruiter search capture and sync, AI generated boolean queries with usage limits and Pro detection, Meilisearch backed search and tests, toast and error handling, throttled search saved notifications, and fixes for flaky Meilisearch tests and CI.
- Skills: Svelte, TypeScript, WXT, Rails 8, Meilisearch, Vitest, RSpec

Portfolio 5: sully.ai, HealthTech

- Project Title: sully.ai, HealthTech
- My Role: Senior Full Stack Engineer, ReactJS, NodeJS, Firebase
- Description: Migrated the sully.ai database from Firebase to Mongoose, built patient dashboards with React and Vite, developed optimized Node.js APIs for EHR integrations, maintained HIPAA compliance across multiple codebases.
- Skills: React, Node.js, Next.js, Stripe, Firebase
- Published Date: Apr 15, 2025

Portfolio 6: Magaloop, Digital B2B Marketplace

- Project Title: Magaloop, Digital B2B marketplace
- My Role: Senior Full Stack Engineer, React Native, ReactJS, Ruby on Rails, NestJS
- Description: Architected and developed core backend infrastructure for Magaloop's B2B wholesale marketplace, cart management with multi vendor order processing and dynamic pricing engine, RESTful and GraphQL API endpoints for high volume transactions, async background job processing for inventory sync and order fulfillment, real time notification systems.
- Skills: Ruby on Rails, React Native, Next.js, GraphQL, Node.js, NestJS
- Published Date: Apr 15, 2025

1.3 ROLE SPECIFIC FIRST PERSON DESCRIPTIONS (FIZZA)

Boolerize, ML Engineer

I built and maintained the Boolerize Chrome extension and its Rails API. On the extension side I handled search capture and sync across LinkedIn, Sales Navigator, and Recruiter, so a recruiter's search gets saved automatically the moment they run it. I built the AI layer that generates boolean query suggestions, with usage limits and Pro tier detection baked in, and set up Meilisearch on the backend so saved searches are instantly searchable. I also built the "search saved" notification, throttled to once a week and suppressed if the extension was already opened recently, so it nudges without being annoying, and fixed flaky Meilisearch tests and CI issues that were slowing the team down.

Magaloop, Senior Full Stack Engineer

I architected and developed the core backend infrastructure for Magaloop's B2B wholesale marketplace, which connects small business owners with wholesale suppliers. I built the cart management system that handles multi vendor order processing, since a single cart could contain items from several different suppliers at once, along with a dynamic pricing engine to handle wholesale pricing logic. I implemented RESTful and GraphQL API endpoints built to handle high volume transactions, set up async background job processing for inventory sync and order fulfillment so nothing blocked the main request path, and built the real time notification system that kept buyers and sellers in sync on order status.

Fullscript, Senior Full Stack Engineer

I led the modernization of Fullscript's catalog platform. I built out advanced product filters and responsive product detail pages, streamlined the checkout flow, and built a settings management system for the platform. I also set up a Cypress end to end testing framework with automated regression coverage, and worked on the GraphQL API integration handling real time inventory updates, since accuracy on inventory matters a lot for a platform prescribing supplements.

PART 2: ZAIRA

Member of the BreakthroughPulse team.

2.1 CLIENT CONTRACTS

Project 1: Move GCP Project to Firebase

- Client Name: Ron
- Job Description: Migrate a GCP project to Firebase, Firebase, Firebase Cloud Firestore, Swift, mobile app development. Client requires strong positive feedback history to bid. Client is based in the United States, Bayside, 5.0 rating over 165 reviews, over \$30,000 total spent, 202 hires with 6 active, member since Nov 21, 2016.
- Client Feedback: Job in progress, no review yet.
- My Role: Not specified
- Project Start Date: Sep 4, 2026
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$50 budget

Project 2: Complete My MVP SaaS Product

- Client Name: Pontus
- Job Description: Take an AI driven compliance platform (GDPR, NIS2, DORA, CSRD) for European SMEs from a live MVP built on Lovable to a production ready high trust platform. Covers risk and DPIA management, document and evidence tracking, AI assisted security questionnaire automation, compliance dashboard with scoring, AI assistant for insights and task creation. Client is a SWE based in Stockholm.
- Client Feedback: 5.0 stars (Apr 8, 2026). Client said she is exactly the kind of developer you want on a project like this, took a Lovable built MVP and turned it into something production ready with proper security, RLS, and tenant isolation, flags issues before they become problems, gives honest estimates, delivers what she says she will, communication is clear and structured with a summary at every milestone.
- My Role: Full stack developer
- Project Start Date: Mar 19, 2026
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$1,660 earned

Project 3: AI plus Chat Platform plus Blockchain Integration

- Client Name: Joseph Kim
- Job Description: Build a next generation chat based platform combining real time chatroom driven workflows, AI powered content generation and validation using OpenAI API with a multi layer validation pipeline, blockchain based non custodial deposit and settlement using Solana or EVM smart contracts, and secure encrypted media and event logging with AES 256 GCM, AWS S3, and SHA 256 hashing. Tech stack Node.js or NestJS or Python FastAPI, PostgreSQL, React or

Next.js, Socket.IO or WebRTC, OpenAI API, AWS, Solana or EVM chains. Timeline is a 2 week MVP with possible long term extension.

- Client Feedback: Job in progress, no review yet.
- My Role: Not specified
- Project Start Date: Jan 3, 2026
- Project End Date: Present (ongoing)
- Budget: Fixed price, \$900 earned

2.2 PORTFOLIO PROJECTS

Portfolio 1: MinIO, Object Storage Setup and S3 API Integration

- Project Title: MinIO, Object Storage Setup and S3 API Integration
- My Role: Full Stack Developer and Storage Engineer
- Description: Deployed a self hosted MinIO object storage cluster as a complete AWS S3 alternative, integrated S3 compatible APIs with a Node.js backend for file upload and download, preview generation, and expirable share links, configured erasure coding, IAM policies, and automated backups using MinIO Client. Achieved 100 percent data privacy and 60 percent cost savings.
- Skills: Minio, Docker, Kubernetes
- Published Date: Apr 15, 2026

Portfolio 2: Fullscript, Healthcare Integration and Dispensary SaaS

- Project Title: Fullscript, Healthcare Integration and Dispensary SaaS
- My Role: Full Stack Engineer, Ruby on Rails, ReactJS, GraphQL, NodeJS
- Description: Optimized real time patient data loading and stabilized critical pharmacy integration back end flows, implemented a comprehensive Cypress E2E testing framework with automated regression coverage, collaborated with cross functional teams for seamless performance rollouts.
- Skills: Ruby on Rails, React, GraphQL, Node.js, PostgreSQL, Cypress, AWS, MongoDB, Next.js
- Published Date: Dec 20, 2025

Portfolio 3: Sully AI, Healthcare Workflow and Automation Platform

- Project Title: Sully AI, Healthcare Workflow and Automation Platform
- My Role: Full Stack Developer, React, Node.js, Healthcare APIs
- Description: Led fullstack development of a HIPAA compliant healthcare automation platform, owned the security model, audit trail implementation, and patient facing workflow development, ensured regulatory compliance and system reliability.
- Skills: FHIR, HIPAA, Node.js, React, Next.js
- Published Date: Dec 20, 2025

Portfolio 4: MyUsta, A Digital Marketplace for Home and Professional Services

- Project Title: MyUsta, A Digital Marketplace for Home and Professional Services, Albania
- My Role: AI or ML Engineer, Backend Developer, Full Stack Developer, Machine Learning Engineer

- Description: Built an AI powered professional services marketplace for Albania connecting homeowners with skilled tradespeople, developed smart matching algorithms using ML, integrated LLM based search and automated booking workflows, deployed on cloud infrastructure for scalability.
- Skills: Machine Learning Model, LangChain, Python, AWS Lambda, API
- Published Date: Mar 16, 2026

Portfolio 5: OLX, E commerce Logistics Platform, Unimog

- Project Title: OLX, E commerce Logistics Platform, Unimog
- My Role: Technical Lead and Backend Architect
- Description: Architected and led development of Unimog, the backend logistics system for OLX Mall, integrating multiple 3PL providers, designing a state machine for comprehensive package tracking, implementing role based access for complex operational workflows.
- Skills: Ruby on Rails, PostgreSQL, Redis, Database Architecture, RESTful API
- Published Date: Dec 25, 2025

Portfolio 6: Zory AI E commerce Recommendation Platform

- Project Title: Zory AI E commerce Recommendation Platform
- My Role: Lead Backend Engineer
- Description: Designed and implemented the backend architecture for a direct to consumer platform, integrating YOLO based image detection and a Pinecone vector database to deliver a scalable AI driven product recommendation engine.
- Skills: Pinecone, Next.js, Django, React, SaaS Development
- Published Date: Dec 20, 2025

Portfolio 7: Noti.io, Blockchain Monitoring and Trading Platform

- Project Title: Noti.io, Blockchain Monitoring and Trading Platform
- My Role: Full Stack Developer, NestJS, Next.js, Ethers.js, Web3
- Description: Architected and delivered a fullstack platform for blockchain monitoring and automated trading, designed core backend services for real time transaction processing and secure wallet interactions, led development of responsive data intensive dashboards, integrated Web3 providers and smart contract interfaces for real time transaction tracking and automated trade execution.
- Skills: Crypto Exchange Platform, Web3, NestJS, Next.js, TypeScript
- Published Date: Dec 20, 2025

2.3 ROLE SPECIFIC FIRST PERSON DESCRIPTIONS (ZAIRA)

myUsta, AI/ML Engineer, Backend Developer, Full Stack Developer, Machine Learning Engineer

I built the AI powered core of myUsta, the professional services marketplace connecting Albanian homeowners with skilled tradespeople. I developed the smart matching algorithms using ML that recommend the right professional based on job type, location, and ratings, and integrated LLM based search so users could describe what they needed in plain language instead of picking from rigid categories. I also built the automated booking workflows and deployed the whole thing on cloud infrastructure so it could scale, which resulted in faster professional discovery and better client satisfaction across the platform.

Zory AI, Lead Backend Engineer

I designed and implemented the backend architecture for Zory, a direct to consumer platform that recommends furniture and decor matching a user's style. My focus was the AI driven recommendation engine, integrating YOLO based image detection so the system could identify items and styles from photos, paired with a Pinecone vector database to deliver scalable, relevant product recommendations at speed as the catalog and user base grew.

Noti.io, Full Stack Developer

I architected and delivered the fullstack platform for Noti, a blockchain monitoring and automated trading system. I designed the core backend services handling real time transaction processing and secure wallet interactions, and led development of the responsive, data intensive dashboards users rely on to track activity. I integrated Web3 providers and smart contract interfaces so the platform could support real time transaction tracking and automated trade execution, which meant getting the on chain data flowing reliably into a UI that stayed fast even under heavy data load.

Fullscript, Full Stack Engineer

I worked on optimizing real time patient data loading and stabilizing the pharmacy integration back end flows for Fullscript, which are the parts of the platform where reliability actually matters most since they're tied to patient care. I built out a comprehensive Cypress end to end testing framework to catch regressions before they hit production, and worked cross functionally with other teams to make sure performance rollouts went out smoothly without breaking anything downstream.

PART 3: MEHAK

Member of the BreakthroughPulse team.

3.1 CLIENT CONTRACTS

Project 1: Add OpenID Connect Authentication to Next.js App

- Client Name: Clement Simon
- Job Description: Integration of OpenID Connect authentication into an existing Next.js web application. Required experience with authentication protocols and the Next.js framework. Scope: OIDC flow setup, connecting to existing app structure, handling session management, and ensuring implementation held up against real world edge cases.
- Client Feedback: No feedback given by client.
- My Role: Full Stack Developer, OIDC flow setup, session management, token lifecycle handling, edge case testing and integration with existing Next.js app structure.
- Project Start Date: Nov 25, 2025
- Project End Date: Feb 9, 2026

Project 2: Implement PDR in Anyplace Viewer App

- Client Name: Tariq Mehmood
- Job Description: Implementation of Pedestrian Dead Reckoning (PDR) in the Anyplace Viewer app to enhance indoor location tracking. PDR uses sensor data to estimate a person's position and movement without relying on GPS or external signals, making it well suited for indoor environments. Work involved integrating PDR logic into the existing mobile app structure and ensuring it worked reliably alongside the app's current positioning system.
- Client Feedback: "Some people work with skill, others with instinct, but Mehak brings both together effortlessly. She understands what you need before you even say it and delivers every time with precision, care, and grace. Her communication is clear, kind, and always timely, making collaboration smooth and stress free. Working with her is not

just easy, it is genuinely exceptional."

- My Role: Mobile Developer, PDR algorithm integration into Anyplace Viewer app, sensor data handling, indoor positioning logic, validation against existing positioning system.
- Project Start Date: Oct 27, 2025
- Project End Date: Oct 29, 2025

Project 3: Social Media Automation Tool Using Langflow

- Client Name: Jon Elbaz
- Job Description: Working with a US based personal care brand to build an agentic, in house social media marketing agency. Applications used: Langflow, GitHub, ChatGPT, and more. Requirements: proficiency in these tools, strong English communication, ability to dedicate 20 hours per week to achieve each benchmark, and ongoing optimization of the agency. Scope covered building out content generation workflows, defining the content strategy layer, and optimizing agents across multiple milestones.
- Client Feedback: "Exceptional work. Very communicative and a pleasure to work with. Highly recommend Mehak and if circumstances allow, would happily work with her again. She is honest, reliable, and hard working."
- My Role: AI or Automation Developer, Langflow agent orchestration, content generation workflow design, content strategy layer, ChatGPT integration, GitHub version control, ongoing agent optimization.
- Project Start Date: May 1, 2025
- Project End Date: Sep 5, 2025

Project 4: Update AI Trip Planner

- Client Name: Andre Beaumont
- Job Description: Bug fix and update on a React and Vite based AI trip planner application that was returning a blank screen on user search. The application used Node.js on the backend. Scope: diagnose the root cause of the rendering issue, apply the fix, and verify the search flow worked correctly end to end.
- Client Feedback: "Fast turnaround and the fix was clean. The blank screen issue was resolved same day and everything has been working since. Short project but Mehak handled it well and did not overcomplicate it."
- My Role: Full Stack Developer, debugging blank screen rendering issue in React or Vite frontend, Node.js backend diagnosis, fix implementation and end to end verification.
- Project Start Date: Jan 8, 2026
- Project End Date: Jan 11, 2026

Project 5: Node.js Developer with Understanding of Agentic Marketing

- Client Name: Kevin Marsh
- Job Description: One day paid trial engagement with a dental hygiene company building a Langflow and Node.js powered social media content engine. Scope: onboard onto the existing prototype, implement small feature updates and performance improvements, produce a full architecture map covering agents, APIs, databases, and external services, and document the system in plain language for non technical stakeholders. Platform included three personas covering psychology, media buying, and marketing strategy, with integrations for trend finding, image generation, and content output.
- Client Feedback: "Mehak was the standout from the trial day. She went through the prototype, made the improvements we asked for, and mapped the architecture clearly enough that our non technical team could follow it. She was the obvious choice to move forward with. Straightforward to work with and delivers what she says she will."
- My Role: Node.js or AI Developer, Langflow prototype onboarding, feature updates and performance improvements, full architecture mapping, non technical stakeholder documentation.
- Project Start Date: Feb 19, 2026

- Project End Date: Feb 20, 2026

3.2 PORTFOLIO PROJECTS

Portfolio 1: n8n Zapier Integration and Automation

- Project Title: n8n Zapier Integration and Automation
- My Role: n8n and Zapier Integration and Automation Specialist
- Description: Automated identity verification workflow using n8n and Zapier for DeepIDV. Integrated APIs, webhooks, and real time processing to streamline KYC, reduce manual work, and improve speed, accuracy, and scalability.
- Skills and Tech Stack: n8n, Zapier, API Integration
- Published Date: Mar 25, 2026

Portfolio 2: Fullscript, Healthcare Dispensary SaaS

- Project Title: Fullscript, Healthcare Dispensary SaaS
- My Role: Full Stack Software Engineer (JavaScript, React, Node.js, GraphQL)
- Description: Spearheaded full stack development for Emerson's digital catalog overhaul, architecting scalable web solutions that transformed the industrial e commerce experience. Built dynamic React and Next.js frontend with advanced product filtering, immersive product detail pages, and streamlined checkout flows. Developed high performance Node.js backend with GraphQL APIs, optimized database queries, and real time inventory sync. Established comprehensive Cypress testing framework achieving extensive coverage across critical user journeys.
- Skills and Tech Stack: Node.js, React, React Native, LLM Prompt Engineering, Ruby on Rails
- Published Date: Not specified

Portfolio 3: Aqua Security, Cloud Security Platform

- Project Title: Aqua Security, Cloud Security Platform
- My Role: Senior Software Engineer and CSPM Team Lead (Node.js, MySQL, AWS, GCP, Azure)
- Description: Led CSPM engineering team, architecting automated remediation systems and security plugins across AWS, GCP, Azure, and Oracle Cloud platforms. Built enterprise grade serverless infrastructure using Lambda, API Gateway, and Kinesis for real time security event processing at scale. Collaborated with security researchers to develop high performance APIs for vulnerability detection and compliance automation. Spearheaded open source CloudSploit contributions, expanding cloud misconfiguration detection capabilities.
- Skills and Tech Stack: AWS Lambda, API Gateway, Kinesis, Multi cloud APIs, Node.js
- Published Date: Not specified

Portfolio 4: OLX, E commerce Logistics System

- Project Title: OLX, E commerce Logistics System
- My Role: Senior Backend Engineer (Node.js, AWS)
- Description: Led the development of a logistics system for OLX Mall, integrating multiple 3PL providers, implementing role based access, and designing a state machine to manage package lifecycle from order to delivery.
- Skills and Tech Stack: Node.js, AWS Lambda, React, NestJS, Firebase
- Published Date: Not specified

Portfolio 5: Dubizzle

- Project Title: Dubizzle
- My Role: Senior Full Stack Engineer
- Description: Contributed to the migration of the Motors vertical mobile app to NativeBase, enhancing UI consistency and improving maintainability across platforms.
- Skills and Tech Stack: Next.js, React, React Native, Node.js, Shopify
- Published Date: Apr 21, 2025

Portfolio 6: BlockSentry, Real time Blockchain Transaction Monitoring

- Project Title: BlockSentry, Real time Blockchain Transaction Monitoring
- My Role: Senior Full Stack Developer
- Description: Developed a real time blockchain notification system using Next.js, NestJS, and Web3.js. Built a responsive dashboard for tracking Ethereum wallet activities and smart contract events. Implemented WebSocket connections for instant alerts, wallet authentication with MetaMask and WalletConnect, and custom indexing services. Deployed on AWS with EC2 and DynamoDB, achieving 99.9 percent uptime. Used Hardhat for smart contract testing and verification.
- Skills and Tech Stack: Next.js, NestJS, Node.js, web3.js, Ethers.js
- Published Date: Not specified

Portfolio 7: My Undercover Agent (MUA)

- Project Title: My Undercover Agent (MUA)
- My Role: Senior Software Engineer, Full Stack Developer
- Description: Single handedly worked on both frontend and backend for over 3 years, developing new features, bug fixes, code refactoring and optimization, APIs, third party integrations, deployment and testing. Worked on frontend using Material UI and HTML or CSS for design, React Redux for state management, API integration, and code bundling using Webpack. Worked on the REST APIs for both web and mobile, task scheduling, authentication and middlewares on the backend.
- Skills and Tech Stack: React, Node.js, React Native, PostgreSQL, Next.js
- Published Date: Apr 21, 2025

Portfolio 8: WeWash

- Project Title: WeWash
- My Role: Senior Software Engineer, Full Stack Developer
- Description: Developed the full website (design, frontend and backend), admin panel and mobile app APIs from scratch. Multiple user interfaces. Integrated Google Analytics and used charts.js for data visualization. Facebook and Google Authentication. Integrated Stripe payments and webhooks. Used SemanticUI for design. Implemented real time chat and notifications for both website and mobile app using Laravel FCM and Pusher. Wrote cron jobs to send scheduled alerts and notifications. Server setup and deployment on AWS.
- Skills and Tech Stack: Vue.js, Laravel, Node.js, NestJS, Firebase
- Published Date: Apr 21, 2025

Portfolio 9: Plena, RPA Bots for Finance Automation

- Project Title: Plena, RPA Bots for Finance Automation
- My Role: Senior Software Engineer
- Description: Developed RPA bots to automate reconciliation, accounts payable, and receivable processes using Python, DocumentAI, and Puppeteer. Reduced manual effort by 70 percent through automated data extraction, validation, and

reporting from PDFs, CSVs, and emails.

- Skills and Tech Stack: Node.js, SQL, AWS Lambda, Robotic Process Automation, Data Extraction
- Published Date: Dec 25, 2025

Portfolio 10: LeaguesGG

- Project Title: LeaguesGG
- My Role: Senior Full Stack Engineer (React Native, ReactJS, NodeJS)
- Description: Worked on features, bug fixes, code refactoring on both frontend and backend. Worked on the backend and APIs using ExpressJS, database queries using Mongoose, implemented algorithms for generating tournament brackets, league fixtures and calculating league and tournament standings. Dathost integration for creating Counter Strike: Global Offensive (CS) servers and fetching live match data to show results in real time. Worked on real time chat and notifications using Socket.IO. Assisted in fetching and updating real time data and stats for League of Legends using Riot API.
- Skills and Tech Stack: React, Node.js, MongoDB, Microservice
- Published Date: Apr 21, 2025

3.3 ROLE SPECIFIC FIRST PERSON DESCRIPTIONS (MEHAK)

OLX Mall, Senior Backend Engineer (Node.js, AWS)

I led development of the logistics system for OLX Mall on the Node.js side. My focus was integrating multiple third party logistics providers behind a consistent internal API, so OLX Mall could route an order to whichever courier made sense without the rest of the platform needing to know the difference. I implemented the role based access system controlling who could see and act on order data, and designed the state machine that tracks a package's lifecycle from order placement through to delivery, handling the transitions and edge cases as packages moved between carriers.

Dubizzle Motors, Senior Full Stack Engineer

I contributed to the migration of the Motors vertical mobile app to NativeBase. My focus was on consistency, making sure the UI held together properly across the app after the framework switch and that the components followed the new design system cleanly, which made the codebase easier to maintain going forward for whoever touched it after me.

LeaguesGG, Senior Full Stack Engineer (React Native, ReactJS, NodeJS)

I worked across the frontend and backend on Leagues.gg, a platform for players to follow their friends' and favorite players' stats across League of Legends, Valorant, andosu. On the backend I built out the ExpressJS APIs and Mongoose database queries, and wrote the algorithms that generate tournament brackets, league fixtures, and standings calculations. I integrated Dathost so the platform could spin up CS servers and pull live match data to show results in real time, built real time chat and notifications using Socket.IO, and helped fetch and update live League of Legends stats through the Riot API.

BlockSentry, Senior Full Stack Developer

I developed a real time blockchain notification system for BlockSentry using Next.js, NestJS, and Web3.js. I built the responsive dashboard used to track Ethereum wallet activity and smart contract events, implemented WebSocket connections so alerts went out instantly rather than on a polling delay, and set up wallet authentication through MetaMask and WalletConnect. I also built custom indexing services so wallet and contract data could be queried quickly, deployed the system on AWS using EC2 and DynamoDB, and used Hardhat for smart contract testing and verification, all in service of keeping the platform's monitoring reliable given how central accurate transaction data is to a tax and accounting product.

WeWash, Senior Software Engineer, Full Stack Developer

I developed WeWash's full website, admin panel, and mobile app APIs from scratch, since this is the digital layer that lets laundry room users book machines and pay without coins or cards. I built multiple user interfaces for different audiences, integrated Google Analytics and Chart.js for usage reporting, added Facebook and Google authentication, and integrated Stripe for payments and webhook handling. I implemented real time chat and notifications for both the website and mobile app using Laravel FCM and Pusher so users get notified the moment their wash cycle finishes, wrote the cron jobs that send scheduled alerts, and handled server setup and deployment on AWS.

DeepIDV, n8n and Zapier Integration and Automation Specialist

I built an automated identity verification workflow for DeepIDV using n8n and Zapier, connecting APIs and webhooks with real time processing to streamline the KYC side of their platform. The goal was reducing the manual work involved in verification workflows and improving speed, accuracy, and scalability, essentially automating the operational glue between DeepIDV's verification services and the systems that trigger them.

Fullscript, Full Stack Software Engineer

I spearheaded the full stack development behind Fullscript's Emerson catalog overhaul, architecting scalable web solutions for what's essentially an industrial e-commerce experience layered on top of a healthcare platform. I built the dynamic React and Next.js frontend, including advanced product filtering, richer product detail pages, and a streamlined checkout flow, and on the backend built a high performance Node.js layer with GraphQL APIs, optimized database queries, and real time inventory sync. I also set up the Cypress testing framework covering the critical user journeys.

Aqua Security, Senior Software Engineer and CSPM Team Lead

I led the CSPM engineering team at Aqua Security, architecting automated remediation systems and security plugins across AWS, GCP, Azure, and Oracle Cloud. I built enterprise grade serverless infrastructure using Lambda, API Gateway, and Kinesis to process real time security events at scale, which matters a lot given how much cloud misconfiguration data a platform like this has to process continuously. I worked closely with security researchers to build high performance APIs for vulnerability detection and compliance automation, and spearheaded contributions to CloudSploit, the open source project, expanding its cloud misconfiguration detection capabilities.

PART 4: ANEEB

CEO or Founder of BreakthroughPulse, also an Upwork freelancer.

4.1 CLIENT CONTRACTS

Project 1: SEO Focused Landing Page Build for Financial Services Firm

- Client Name: William Stacey
- Job Description: Lead generation website for a financial services company built for organic search performance.
Requirements: lightweight modern framework, reusable page templates across roughly a dozen launch pages, headless CMS for non technical content editing, full technical SEO coverage (metadata, canonical tags, sitemap, robots.txt, structured data markup), lead capture forms with tracking and spam filtering, and staging QA before production launch.
- Client Feedback: "Really happy with the work. Site is fast, looks clean, and we are already seeing traffic come in. Had a small issue after launch and Aneeb jumped on it straight away. Definitely coming back for the next project."
- My Role: Full Stack Developer, site architecture, reusable page templates, headless CMS integration, full technical SEO implementation, lead capture forms with tracking, staging QA, production launch and post launch support.
- Project Start Date: Jul 7, 2025

- Project End Date: Aug 22, 2025

Project 2: Technical Architecture and Development Roadmap for Knowledge Platform

- Client Name: Elliot Drummond
- Job Description: Discovery and architecture sprint for a large scale reference platform, establishing the technical foundation before full development began. Deliverables: complete architecture plan (frontend, backend, hosting, database, authentication, API design, scaling), database and relationship modeling for core content types, AI query routing and moderation plan, OWASP aligned security approach, GitHub setup, phased development roadmap, and risk assessment.
- Client Feedback: "I was not sure what to expect from an architecture sprint but Aneeb made it genuinely useful. He asked questions I had not thought about and the roadmap he delivered gave us a real plan rather than a generic one. Very glad we did this before jumping into development."
- My Role: Technical Architect, full architecture planning, database modeling, AI query routing design, security planning, GitHub setup, phased roadmap and risk assessment documentation.
- Project Start Date: Sep 3, 2025
- Project End Date: Oct 17, 2025

Project 3: React and Firebase Backend for E Commerce Platform

- Client Name: Nasser Al Fahad
- Job Description: Backend development for a custom e commerce platform with a bilingual React frontend already in place. Scope: Firebase setup, authentication across email, Google, and Apple, image generation pipeline with multi tier fallback, payment gateway integration, real time Firestore order dashboard, content moderation combining keyword filtering with vision based review, admin approval queue, and deployment with a custom domain.
- Client Feedback: "Aneeb just got on with it. Payments, auth, order management, moderation, he handled everything and kept us updated without us having to ask. The platform works exactly as we needed. Only developer we will use from here."
- My Role: Backend Developer, Firebase setup, multi provider authentication, image generation pipeline, payment gateway integration, real time Firestore dashboard, content moderation system, admin approval queue, deployment and custom domain configuration.
- Project Start Date: Nov 10, 2025
- Project End Date: Jan 23, 2026

Project 4: Browser Extension Feature Development with Svelte and Rails API

- Client Name: Liam Fogarty
- Job Description: Feature development on a browser extension built with WXT, Vite, Svelte 5, and TypeScript, communicating with a Rails 8 API over REST with JWT authentication. Work added new third party integrations, browser notification support, improved search and filtering logic, and interface refinements, all following the patterns already in the codebase.
- Client Feedback: "Picked up the codebase faster than I expected and got straight into it. Everything came in on time and he spotted a bug we did not even know was there. Good guy to work with."
- My Role: Full Stack Developer, browser extension feature development with WXT, Vite, Svelte 5, TypeScript, Rails 8 API integration, third party integrations, notification support, search and filter improvements, bug discovery and fix.
- Project Start Date: Feb 5, 2026
- Project End Date: Mar 14, 2026

Project 5: Authentication Overhaul for Next.js Web Application

- Client Name: Stefan Richter
- Job Description: Rebuild of the authentication layer for a Next.js application implementing OpenID Connect. Scope: configure the OIDC flow, integrate with the existing app structure, handle session management and token lifecycle, and test edge cases before handover. Engagement ran over approximately ten weeks.
- Client Feedback: "We had been putting off fixing our auth for months. Aneeb sorted it properly in a fraction of the time we expected. Knew exactly what he was doing and did not need much from us. Highly recommend."
- My Role: Full Stack Developer, OIDC implementation, session management, token lifecycle handling, edge case testing and integration with existing Next.js application.
- Project Start Date: Apr 14, 2025
- Project End Date: Jun 20, 2025

Project 6: Agentic Content Workflow Build Using Langflow and Node.js

- Client Name: Craig Donaghue
- Job Description: Development of an agentic content generation system built on Langflow and Node.js for a consumer brand. System used multiple personas across content strategy and production with integrations for trend research, image generation, and multi format output. Scope: enhance the existing prototype, map the full architecture across agents, APIs, and external services, and document the setup for non technical stakeholders.
- Client Feedback: "Not easy to find someone who gets both the tech and the marketing side of something like this. Aneeb got both. Improved the prototype, explained the architecture clearly, and was straightforward throughout. Would work with him again."
- My Role: AI or Automation Developer, Langflow agent development, Node.js backend, multi persona content system, trend research and image generation integrations, architecture mapping, non technical documentation.
- Project Start Date: Mar 3, 2026
- Project End Date: Apr 11, 2026

Project 7: Indoor Positioning Feature Integration for Mobile Viewer App

- Client Name: Bilal Chaudhry
- Job Description: Integration of a Pedestrian Dead Reckoning module into a mobile viewer application to improve indoor location tracking. Work involved building PDR logic into the app's existing positioning framework using device sensor data rather than external signals, validated correctly alongside the current system. Delivered within a three day window.
- Client Feedback: "Small job but he treated it seriously. Delivered fast, no back and forth needed, worked first try. Will use again."
- My Role: Mobile Developer, PDR module integration, device sensor data handling, indoor positioning logic, validation against existing positioning system.
- Project Start Date: May 19, 2026
- Project End Date: May 22, 2026

4.2 PORTFOLIO PROJECTS

Portfolio 1: Sully, AI Agents, Node.js, React Dashboard, HIPAA Compliant

- Project Title: Sully, AI Agents, Node.js, React Dashboard, HIPAA Compliant
- My Role: Full Stack Developer (React, Node.js, Healthcare APIs)
- Description: Migrated the complete database system from Firebase to Mongoose. Developed core UI components for patient dashboards and clinical tools using React and Vite. Built and optimized Node.js APIs handling EHR integrations and visit automation. Implemented real time features reducing physician documentation time by 40 percent. Contributed

across multiple repositories in a healthcare compliant environment.

- Skills and Tech Stack: Node.js, React, Firebase, MongoDB, Python
- Published Date: Apr 12, 2025

Portfolio 2: Identity Verification Platform, DeepIDV

- Project Title: Identity Verification Platform, DeepIDV
- My Role: Senior Software Engineer
- Description: Built frontend features for DeepIDV, an enterprise identity verification platform covering KYC, AML, deepfake detection, sanctions screening, and biometric matching across 211 plus countries. Developed a modular workflow builder letting compliance teams configure verification flows without code, integrated APIs with sub 150ms response times, and contributed to the React SDK for embedding verification flows in third party platforms.
- Skills and Tech Stack: React, Next.js, Node.js, API Integration, REST API
- Published Date: Not specified

Portfolio 3: OLX, Logistics System

- Project Title: OLX, Logistics System
- My Role: Senior Backend Engineer
- Description: Played a key role in developing a multi tenant logistics orchestration system for OLX Mall. Engineered a scalable solution featuring seamless integration of multiple third party logistics (3PL) providers, implemented a granular role based access control (RBAC) system, and built a robust state machine engine to automate and track the package lifecycle from order placement to final delivery.
- Skills and Tech Stack: AWS Lambda, MySQL, React, React Native, Next.js
- Published Date: Not specified

Portfolio 4: LinkedIn Boolean Search Tool, Chrome Extension and Rails AI Backend

- Project Title: LinkedIn Boolean Search Tool, Chrome Extension and Rails AI Backend
- My Role: ML Engineer
- Description: Built and maintained the Booleaner Chrome extension and Rails API: LinkedIn, Sales Navigator, and Recruiter search capture and sync, AI generated boolean queries with usage limits and Pro detection, Meilisearch backed search and tests, toast and error handling, and a Search saved notification (throttled to once per week, suppressed when the extension was opened recently). Fixed flaky Meilisearch tests and CI (sync remove plus polling, cleanup using indexes results).
- Skills and Tech Stack: Ruby on Rails, REST API, Svelte, TypeScript
- Published Date: Not specified

Portfolio 5: Web3 Trading Tool, Web3.js, Next.js, NestJS Microservices, SDKs

- Project Title: Web3 Trading Tool, Web3.js, Next.js, NestJS Microservices, SDKs
- My Role: Full Stack Developer (Next.js, NestJS, NX Monorepo, Microservices)
- Description: Engineered a real time trading dashboard using Next.js, providing users with live tracking and analytics of market positions and performance. Developed a robust NestJS backend to manage complex trade execution logic and real time smart contract analysis. Designed and deployed scalable AWS microservices for high speed transaction processing and pre trade risk detection. Outcome: 40 percent increase in successful trade execution, and successfully onboarded over 500 active users at launch.
- Skills and Tech Stack: Next.js, NestJS, web3.js, TypeScript, PostgreSQL

- Published Date: Not specified

Portfolio 6: myUsta, A Digital Marketplace for Home and Professional Services

- Project Title: myUsta, A Digital Marketplace for Home and Professional Services
- My Role: AI or ML Engineer, Backend Developer, Full Stack Developer, Machine Learning Engineer
- Description: Built an AI powered professional services marketplace for Albania connecting homeowners with skilled tradespeople. Developed smart matching algorithms using ML to recommend the right professional based on job type, location, and ratings. Integrated LLM based search and automated booking workflows. Deployed on cloud infrastructure for scalability. Result: faster professional discovery and improved client satisfaction across the platform.
- Skills and Tech Stack: Machine Learning Model, LangChain, Python, AWS Lambda, API
- Published Date: Mar 16, 2026

Portfolio 7: Next.js, Cloudflare, Stripe, NestJS, External APIs

- Project Title: Next.js, Cloudflare, Stripe, NestJS, External APIs
- My Role: Full Stack Developer (Next.js, Cloudflare Workers, Stripe)
- Description: Built auto DM system with smart rate limiting to prevent account flags. Developed post scheduler with optimal timing recommendations. Created analytics dashboard comparing user growth vs competitors. Implemented Stripe subscriptions with custom billing logic. Designed Cloudflare Workers for edge cached API responses.
- Skills and Tech Stack: Cloudflare, Next.js, Stripe, Node.js, MongoDB
- Published Date: Not specified

Portfolio 8: Dubizzle, Motors App Migration

- Project Title: Dubizzle, Motors App Migration
- My Role: React Native Developer
- Description: Played a key role in modernizing the Motors vertical mobile application by spearheading its migration to NativeBase. This initiative significantly improved UI consistency and design system adherence across both iOS and Android platforms. The transition enhanced code maintainability, streamlined component reuse, and accelerated feature development cycles for the engineering team.
- Skills and Tech Stack: AWS Cloud9, React Native, Node.js, Amazon EC2, Vue.js
- Published Date: Apr 19, 2025

4.3 ROLE SPECIFIC FIRST PERSON DESCRIPTIONS (ANEEB)

Boolerize, ML Engineer

I owned the same core build, the Boolerize Chrome extension and its Rails API, covering LinkedIn, Sales Navigator, and Recruiter search capture, AI generated boolean queries with usage limits and Pro detection, and Meilisearch backed search with tests. I built the toast and error handling so failures in the extension surface cleanly instead of silently breaking, and worked through the "search saved" notification throttling logic. I also went in and fixed a set of flaky Meilisearch tests and CI failures, cleaning up the sync remove and polling logic and the indexes results cleanup so the test suite stopped giving false failures.

OLX Mall, Senior Backend Engineer

I played a key role building the multi-tenant logistics orchestration system for OLX Mall. I engineered the integration layer connecting multiple 3PL providers into one system, implemented a granular role based access control setup so different

internal teams only saw what was relevant to them, and built the state machine engine that automated and tracked the package lifecycle from order placement to final delivery, across the React, React Native, Next.js, AWS, and MySQL stack.

Dubizzle Motors, React Native Developer

I played a key role modernizing the Motors mobile app by spearheading its migration to NativeBase. I worked across both iOS and Android to make sure the transition actually improved UI consistency and design system adherence rather than just moving the problem, which in turn made the codebase easier to maintain, components easier to reuse, and new features faster to ship for the rest of the engineering team going forward.

myUsta, AI/ML Engineer, Backend Developer, Full Stack Developer, Machine Learning Engineer

I built the same AI powered marketplace core for myUsta, the smart matching algorithms that recommend tradespeople by job type, location, and ratings, the LLM based search layer, and the automated booking workflows, then deployed it on cloud infrastructure built to scale as the platform grew. The result was faster professional discovery for homeowners and a noticeable lift in client satisfaction across the platform.

DeepIDV, Senior Software Engineer

I built frontend features for DeepIDV's enterprise identity verification platform. I developed a modular workflow builder that lets compliance teams configure their own verification flows without writing code, worked on integrating APIs that needed to return results in under 150ms, and contributed to the React SDK that lets other companies embed DeepIDV's verification flows directly inside their own platforms.

PART 5: HASSAN

Upwork freelancer, BreakthroughPulse related.

5.1 CLIENT CONTRACTS

Project 1: SaaS Product Development, Compliance Platform for European SMEs

- Client Name: James Whitmore
- Job Description: Compliance platform serving European regulatory frameworks including GDPR, NIS2, DORA, and CSRD, designed for small and medium sized businesses lacking dedicated compliance teams. The platform already handled risk assessments, DPIA workflows, document storage, evidence tracking, a scoring dashboard, and a task creation layer. Scope: restructure the data layer with proper row level security, enforce tenant isolation, close authentication gaps, and build an administrative panel for full product team visibility and control.
- Client Feedback: "Hassan took our broken MVP and turned it into something we could actually ship. He knew what needed fixing before we did and never had to be chased. Every milestone came with a clear summary of what was done and why. One of the few developers I have worked with who genuinely takes ownership."
- My Role: Full Stack Developer, data layer restructuring with RLS, tenant isolation enforcement, authentication gap remediation, administrative panel development, milestone documentation.
- Project Start Date: Mar 5, 2026
- Project End Date: Apr 12, 2026

Project 2: Real Time Chat System with Blockchain Settlement Layer

- Client Name: Ryan Carter

- Job Description: Two module platform combining a conversational layer with a blockchain backed transaction system, both sharing the same infrastructure and data model. Chatrooms act as transactional containers for messages, media uploads, and settlement flows, with role based access for users, moderators, and administrators. Stack: OpenAI API with validation pipeline, AES 256 GCM media encryption, AWS S3 storage, SHA 256 hash verification, spatiotemporal event logging, and smart contracts on a non custodial model.
- Client Feedback: "Hassan handled a complex build that two other developers had walked away from. Clean code, steady communication, and delivered exactly what was scoped."
- My Role: Full Stack Developer, OpenAI API integration with logic, safety, and data grounding validation pipeline, token tracking, model abstraction layer, encrypted media pipeline, AWS S3 setup, blockchain smart contract deposit and settlement, on chain event records linked to off chain sessions.
- Project Start Date: Jan 8, 2026
- Project End Date: Mar 2, 2026

Project 3: Brand Asset Portal, Secure Media Management and Distribution

- Client Name: Marcus Webb
- Job Description: Secure brand asset portal for internal teams and external partners, handling logos, product photography, and technical specification sheets. Internal staff upload and categorise assets while partners access only the brand materials assigned to them. Requirements: bilingual interface with role based permissions, CDN backed storage via Cloudflare R2, headless CMS backend, React and Next.js frontend with Tailwind CSS, and authentication enforcing access boundaries without friction for legitimate users.
- Client Feedback: "Built us a portal our partners could use without any hand holding, which was exactly the brief. Solid work and no issues since launch."
- My Role: Full Stack Developer, bilingual role based UI, Cloudflare R2 CDN integration, headless CMS backend, React or Next.js or Tailwind CSS frontend, authentication and access control system.
- Project Start Date: Oct 14, 2025
- Project End Date: Dec 9, 2025

Project 4: Browser Extension Development, Recruiter Tool for LinkedIn

- Client Name: Daniel Kowalski
- Job Description: Continued development on a recruiter facing browser extension for LinkedIn and related platforms. Stack: WXT, Vite, Svelte 5, and TypeScript on the frontend, Rails 8 API backend using REST and JWT authentication. Scope: new service integrations, browser notification support, reworked search logic to reduce false positives, and interface improvements to make the core workflow faster.
- Client Feedback: "Picked up a messy codebase quickly and improved things we had not even asked him to fix. The extension runs better now than it ever has."
- My Role: Full Stack Developer, browser extension development with WXT, Vite, Svelte 5, TypeScript, Rails 8 API integration, new service integrations, notification support, search logic rework, interface improvements.
- Project Start Date: Aug 6, 2025
- Project End Date: Sep 24, 2025

Project 5: Full Stack Web Development and CSS Animation for Visual Search Engine

- Client Name: Chris Harmon
- Job Description: Pre launch work on appranker.io, a visual search engine for software applications. Product frontend and database built on Base44 no code platform; a separate crawl and search layer was already running in production. Scope: pixel precise CSS adjustments against Figma designs, completion of outstanding features, and full consolidation of the Base44 project with the live production site across React, TypeScript, Tailwind CSS, and Node.js.

- Client Feedback: "We were two weeks from launch with a pile of things still open and Hassan sorted through all of it. The CSS work against the Figma files was accurate and the codebase merge went better than expected. He did not need much from me which was exactly what I needed at that point. We launched on time and the product has been running without issues since."
- My Role: Full Stack Developer, pixel precise Figma to CSS implementation, feature completion, codebase consolidation across React, TypeScript, Tailwind CSS, and Node.js.
- Project Start Date: Jun 11, 2025
- Project End Date: Jul 30, 2025

Project 6: Cloud Deployment of Python Trading Bot with Kalshi API

- Client Name: Samuel Osei
- Job Description: Migration and deployment of a Python trading bot from Replit to Railway for stable, uninterrupted operation. Stack: Python 3.11, Flask, Kalshi prediction markets API with RSA PSS authentication, Discord webhook notifications, Unicorn. Scope: environment configuration, dual web and background worker processes, bug fixes discovered during testing, and full deployment documentation.
- Client Feedback: "Fast deployment, found and fixed two bugs I did not know about, and sent proper documentation after. Will use again."
- My Role: DevOps or Backend Developer, Railway deployment, environment configuration, dual process setup (web plus background worker), bug discovery and fixes, deployment documentation.
- Project Start Date: Apr 17, 2025
- Project End Date: May 3, 2025

Project 7: No Code to Production Migration, React and Node.js Launch Work

- Client Name: Nathan Brooks
- Job Description: Follow on engagement on appranker.io covering outstanding work from the first phase and preparing the product for launch. Scope: remaining Figma matched CSS passes, finishing the last functional gaps, and ensuring both codebases operated correctly as a unified system across React, TypeScript, Tailwind CSS, and Node.js.
- Client Feedback: "Second time working with Hassan and he needed zero ramp up time. The site launched cleanly and he is the only person I trust with this codebase."
- My Role: Full Stack Developer, final CSS passes against Figma specs, feature gap completion, unified codebase operation across React, TypeScript, Tailwind CSS, and Node.js.
- Project Start Date: Feb 17, 2025
- Project End Date: Apr 4, 2025

Project 8: E Commerce Review Integration, Yotpo on Rails and Avenue CMS

- Client Name: David Okafor
- Job Description: Integration of the Yotpo product review system into a Ruby on Rails e commerce store running on the Avenue CMS. Work connected Yotpo review widgets and data to individual product pages, following Avenue CMS conventions throughout with no structural changes to the existing store.
- Client Feedback: "Knew the stack, got it done, worked first time. Small project but that is how you find out if someone actually knows what they are doing."
- My Role: Backend Developer, Yotpo review system integration into Rails or Avenue CMS, product page review widget and data connection, convention compliant implementation.
- Project Start Date: Dec 9, 2024
- Project End Date: Jan 14, 2025

5.2 PORTFOLIO PROJECTS

Portfolio 1: Sully.ai, AI Clinical Workflow Infrastructure

- Project Title: Sully.ai, AI Clinical Workflow Infrastructure
- My Role: Senior DevOps Engineer
- Description: Worked as Senior DevOps Engineer on an AI powered healthcare platform used by providers for clinical workflows. Managed cloud infrastructure and deployment pipelines supporting AI model integrations and API services. Handled environment setup, secure deployments, and monitoring across staging and production, ensuring reliable uptime and secure handling of healthcare data across the platform.
- Skills and Tech Stack: Linux, Terraform, CI/CD, Kubernetes, MySQL
- Published Date: Jun 18, 2026

Portfolio 2: DeepIDV, Enterprise Identity Verification and Compliance Platform

- Project Title: DeepIDV, Enterprise Identity Verification and Compliance Platform
- My Role: Senior Cloud and DevOps Engineer
- Description: DeepIDV is a Canadian enterprise SaaS platform providing identity verification and compliance infrastructure across 211 plus countries, covering KYC, AML, deepfake detection, sanctions screening, and biometric matching. The platform runs multiple products including Luna, Arc, Arbiter, and deepeye, spanning compliance automation, real time fraud detection, and biometric lookups. Owned the cloud infrastructure, CI/CD pipelines, and reliability engineering for this high throughput, latency sensitive platform where sub 150ms API response times were a hard requirement.
- Skills and Tech Stack: Amazon Web Services, Terraform, Linux System Administration, Docker, Kubernetes
- Published Date: Apr 28, 2026

Portfolio 3: Cloud Infrastructure and CI/CD, Fullscript Healthcare Platform

- Project Title: Cloud Infrastructure and CI/CD, Fullscript Healthcare Platform
- My Role: Senior DevOps Engineer
- Description: Worked on the engineering team for Fullscript, a large scale healthcare dispensary platform serving high traffic loads. Managed cloud infrastructure and deployment pipelines supporting Node.js and GraphQL services across multiple environments. Built and maintained CI/CD workflows to streamline releases, reduce deployment risk, and ensure reliable delivery for a platform handling sensitive healthcare transactions.
- Skills and Tech Stack: CI/CD, Docker, GraphQL, Amazon Web Services, Kubernetes
- Published Date: Jun 16, 2026

Portfolio 4: Logistics Platform Cloud Engineering, OLX Mall

- Project Title: Logistics Platform Cloud Engineering, OLX Mall
- My Role: Senior DevOps Engineer
- Description: Managed AWS infrastructure and Lambda deployments for OLX Mall, a logistics platform handling multiple third party delivery integrations. Owned CI/CD pipeline operations and maintained cloud environments supporting the full order to delivery lifecycle across dev, staging, and production, ensuring stable releases and reliable infrastructure for a high volume order management system.
- Skills and Tech Stack: Amazon Web Services, AWS Lambda, Kubernetes, Docker, CI/CD
- Published Date: Jun 18, 2026

5.3 ROLE SPECIFIC FIRST PERSON DESCRIPTIONS (HASSAN)

OLX Mall, Senior DevOps Engineer

I wasn't writing the application logic on this one, I owned the infrastructure underneath it. I managed the AWS infrastructure and Lambda deployments powering OLX Mall's logistics platform, which had to reliably handle multiple third party delivery integrations without dropping requests. I owned the CI/CD pipeline operations and kept the dev, staging, and production environments stable, so the engineering team could ship changes to the order to delivery lifecycle without worrying about infrastructure breaking underneath them. Given the order volume this platform handles, reliable releases and consistent environments were the whole job.

DeepIDV, Senior Cloud and DevOps Engineer

I owned the cloud infrastructure, CI/CD pipelines, and reliability engineering for DeepIDV, a platform that verifies identities across 211 plus countries covering KYC, AML, deepfake detection, sanctions screening, and biometric matching. Given the platform runs multiple products, Luna, Arc, Arbiter, and deepeye, and needs sub 150ms API response times, my job was keeping deployments fast and safe without ever compromising that latency requirement, since a slow verification check is a lost signup for their customers.

Fullscript, Senior DevOps Engineer

I worked on the infrastructure side for Fullscript, managing cloud infrastructure and deployment pipelines supporting the Node.js and GraphQL services across their environments. Since this platform handles sensitive healthcare transactions and serves high traffic loads, my focus was building and maintaining CI/CD workflows that reduced deployment risk and kept releases reliable, without slowing the engineering team down.
